

PLASMA SKIN TIGHTENING

Plasma skin tightening is being tipped as the next big thing in skin rejuvenation because it gives all the results of a facelift without any surgery or needles. It is also being offered as an alternative to dermal fillers and anti-wrinkle injections.

What is Plasma Therapy?

A non-surgical procedure with little risk, it targets eye-bag eyelid correction, face-lift and neck lifts, lines and wrinkles, skin tags, stretch marks, scars, cholesterol pockets and thread veins.

What makes it different from other treatments?

Plasma therapy intentionally creates micro-trauma and energy in the form of plasma to rejuvenate skin by harnessing the body's own natural growth factors to stimulate healthy new tissue and collagen to improve skin tone lifting and tightening. It delivers the most optimal and natural looking, long-lasting results with the shortest downtime and fast recovery.

Forehead and frown lines	R2 000
Wrinkles on top lip	R1 700
Wrinkles underneath bottom lip	R1 700
Top and bottom of lip	R3 000
